“Regionally Significant”

MIC area “regionally significant” projects are roadway, transit, and bicycle/pedestrian projects that occur on facilities that **serve regional transportation needs** (such as access to and from the area outside the region and major activity centers within the region), or that **connect to major transportation assets** (including transit, seaport, airport, and passenger rail terminals).

A roadway project is generally considered regionally significant if **it adds one or more travel lanes for over one mile or involves the addition or reconfiguration of an interchange such that a movement is added or eliminated** (e.g., a new turning movement at an intersection) and **would normally be included in the modeling of the MIC area’s transportation network** and in the air quality conformity analysis for the LRTP and TIP and amendments to the LRTP and TIP.

These facilities include all interstates, freeways, principal arterial highways, principal arterials, National Highway System (NHS), NHS intermodal connectors, and all fixed guideway transit facilities that offer an alternative to regional highway travel. *(Approved by the MIC Policy Board 5/21/14)*

“Regionally Significant”

- New document section or chapter going forward for Duluth 2024-2027 TIP and beyond...
- These projects do not have any federal funding, and have been considered “non-regionally significant”
- These projects are included as an appendix in the Duluth 2023-2026 TIP
